Apple Recruitment Team

Apple Inc.
One Apple Park Way
Cupertino, CA 95014

30th September 2026

Dear Recruiter,

I am writing to express my strong interest in the Machine Learning Engineer position at Apple. As a Software Engineer with two years of experience at Simplify3x Software Private Limited and a currently pursuing PhD in Data Science at CHRIST (Deemed-to-be-University), Bangalore, I am eager to contribute to Apple's mission of building intelligent, user-centric products.

At Simplify3x, I designed and implemented RESTful APIs and microservices that significantly improved response times and system scalability for the SimplifyQA product. I built real-time data-driven dashboards using Angular and D3.js, enabling stakeholders to monitor key performance metrics. This experience honed my ability to ship production-grade software that balances performance, reliability, and user impact -- principles central to engineering at Apple.

My technical expertise spans the full ML stack: PyTorch, TensorFlow, Hugging Face, and LangChain for model development; TensorRT, ONNX, Triton, and vLLM for inference optimization; Apache Spark and Kafka for large-scale data processing; and Kubernetes, Docker, MLflow, AWS SageMaker, and GCP Vertex AI for deployment and orchestration. My PhD research in Data Science further strengthens my ability to approach complex, open-ended problems with rigor -- from on-device inference optimization to real-time computer vision systems built with MediaPipe and OpenCV. I am confident this blend of production engineering, ML expertise, and research depth would allow me to make meaningful contributions to your team.

I would welcome the opportunity to discuss how my background and skills align with Apple's needs. Thank you for your time and consideration.

Sincerely,

Bernard Birendra Das
