PROFILE SUMMARY

AI Engineer and PhD Scholar in Data Science with 2+ years of software engineering experience building Generative AI applications, RAG pipelines, and edge-intelligence frameworks. Proficient in LLM orchestration (LangChain, vLLM, Ollama), transformer fine-tuning (PEFT/LoRA), vector search, and deploying low-latency AI microservices with Triton. Experienced in developing decentralized federated learning systems and multi-modal computer vision models for production environments.

WORK EXPERIENCE

Simplify3x Software Private Limited • Software Engineer

January 2023 – May 2025 | 2 years 5 months | Bengaluru, Karnataka

- Developed and maintained two impactful modules of SimplifyQA product for the new UI, namely PDF Reports and Pipeline Executions.
- Designed and implemented RESTful APIs and microservices that led to significant improvements in response times and improving overall system scalability.
- Developed dynamic, data-driven dashboards using Angular and D3.js, enabling real-time visualization of key performance metrics for business stakeholders.

PROJECTS

Distributed Real-Time RAG & LLM Engine • LangChain, vLLM, Triton, PyTorch, Kafka, Kubernetes

2026

- Architected a document-grounded RAG pipeline with LangChain and vLLM for high-throughput LLM reasoning and Q&A.
- Deployed neural Two-Tower retrieval models on NVIDIA Triton with ONNX format for sub-millisecond similarity lookups.

Better Pulse – Edge AI Platform • FastAPI, PyTorch, Ollama, Hugging Face, React Native, Docker

2026

- Designed a decentralized edge AI framework training on-device models and aggregating updated weights via FastAPI.
- Integrated local LLM clinical inference via Ollama and fine-tuned pre-trained Hugging Face transformers.
