PROFILE SUMMARY

MLOps Engineer and PhD Scholar in Data Science with 2+ years of production software engineering experience building automated ML lifecycle platforms, CI/CD pipelines, and scalable serving infrastructure. Specialized in model serving (NVIDIA Triton, vLLM), container orchestration (Kubernetes, Docker), and experiment tracking with MLflow. Proven track record in deploying fault-tolerant distributed inference clusters and automating edge/cloud model delivery workflows.

WORK EXPERIENCE

Simplify3x Software Private Limited • Software Engineer

January 2023 – May 2025 | 2 years 5 months | Bengaluru, Karnataka

- Developed and maintained two impactful modules of SimplifyQA product for the new UI, namely PDF Reports and Pipeline Executions.
- Designed and implemented RESTful APIs and microservices that led to significant improvements in response times and improving overall system scalability.
- Developed dynamic, data-driven dashboards using Angular and D3.js, enabling real-time visualization of key performance metrics for business stakeholders.

PROJECTS

Distributed Real-Time RAG & Serving Platform • NVIDIA Triton, Kubernetes, MLflow, Kafka, PySpark, Docker

2026

- Orchestrated low-latency model inference clusters using NVIDIA Triton (ONNX) and vLLM deployed on Kubernetes.
- Tracked end-to-end model training runs and lifecycle stages via MLflow, integrating Kafka and PySpark data streaming.

Better Pulse – Federated Edge MLOps • FastAPI, Docker, PyTorch, Ollama, SQL, React Native

2026

- Implemented automated decentralized weight aggregation pipelines and microservices containerized with Docker.
- Engineered reproducible training workflows and model packaging for on-device and local LLM inference engines.
